## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mike Shea on September 8, 2009.

Regarding Claim 1, **Please insert the phrase "when an incoming or outgoing call is detected" in between the word "function" and the period "." in line 11.**

### *Allowable Subject Matter*

2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or show the following:

**wherein the broadcast signal is recorded in a recording device installed in an external recording server in response to a request from the mobile terminal device via a mobile communication network accessible to the mobile communication function when an incoming or outgoing call is detected**

**wherein the recording-start/playback command information generating circuit sends recording command information for recording the broadcast information to an external recording server via a mobile communication network**

Art Unit: 2618

**when a broadcast signal receiving failure is detected by the receiving-status detector during receiving of the broadcast signal, sends recording command information for recording the currently received broadcast information to an external recording server via a mobile communication network when an incoming or outgoing call is detected by the call detector and notifies the receiving signal recorder about broadcast signal recording command information wherein the recording-start/playback command information generating circuit sends playback command information to stop playback of the broadcast information to the external recording server via the communication network when restoration of broadcast signal receiving is detected by the receiving status detector, sends playback command information to playback the broadcast information to the external recording server via the communication network when termination of a call is detected by the call detector and reports playback command information to the receiving signal recorder**

**the recording server records broadcast information being received by the mobile terminal device when the mobile terminal device sends a command which requires recording of the broadcast information to the recording server when a failure of receiving is detected during receiving of the broadcast information by the mobile terminal device**

Claims 1, 12, and 18 and their corresponding dependent claims are therefore allowed. Claim 61 is allowed for the same reasons set forth in the Office Action dated April 1, 2009.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
